Profile

Full-stack Java developer with 4 years of experience building web and Android applications. Skilled in Spring Boot, React/React Native, AWS, and cloud-based microservices.

Skills

Backend: Java, Spring Boot, Spring MVC, Hibernate, Maven, Node.js, JWT, Apache Kafka, TDD, Unit Testing

Frontend: JavaScript, TypeScript, HTML, CSS, React.js, React Native

Databases: MySQL, PostgreSQL, MongoDB, JPA

Cloud & Deployment: AWS, Docker, NGINX

Version Control: Git, GitHub

Work Experience

Metadesign Software, Pune

July 2022 - Present

Software Engineer - Java Full Stack Developer

- Developed web-based and Android applications in both monolithic and microservice architectures as part of different projects.
- Wrote and tested REST APIs using Postman and JUnit.
- Developed features, performed RCA, and fixed bugs across modules.
- Explored new technologies by building proof of concepts.
- Took part in code reviews, debugging, and testing to keep quality high.

Happily Ever, Hyderabad

Jan 2022 - Jun 2022

Software Engineer Trainee - Java Full Stack

- Developed UI screens and APIs to support app features.
- Helped with alerts, notifications, and preparing JSON data for database collections used in questionnaires.
- Assisted the team with development and testing tasks as needed.

Projects

DMS (Dymond Management System)

[Java, Microservices, Rest API, React Js, IoT, Docker, GitHub, JSON Web Token, Postman, PostgreSQL, AWS]

DMS is a SaaS platform that lets merchants manage IoT devices connected to hardware such as vending machines, car washes, and laundromats, enabling updates, monitoring, and remote control.

Responsibility:

- Built Spring Boot microservices (Controllers, Services, Repositories) for device lifecycle management.
- Designed DTOs for API request/response handling and JPA Entities for database persistence.
- Implemented JWT authentication and ACL-based role access control with Spring Security.
- Added real-time monitoring and alert notifications, reducing downtime by catching 200+ device failures annually.
- Integrated AWS IoT Core + Lambda for device alerts and notifications.
- Contributed to deployment on AWS using Docker and CI/CD pipelines.

WeVend

[Java, Spring Boot, Rest API, React Js, React Native, IoT, GitHub, Postman, PostgreSQL, AWS]

WeVend is an unattended vending app for web and Android, deployed across multiple locations in the US and Canada.

Responsibility:

- Built React.js web and React Native Android UIs for product/status/transaction flows.
- Synced device data in real-time across web and Android apps.
- Developed Spring Boot backend with PostgreSQL for inventory and device health.
- Integrated payment workflows with web and Android systems.

eGift Solutions

[React Native, Javascript, Java, Android, Clover SDK, GitHub]

eGift Solutions is a Gift card management app for Clover Android devices, deployed across 500+ merchants and 900+ devices in the US and Canada

Responsibility:

- Delivered and deployed a Clover Android app for gift card management, adopted by 500+ merchants.
- Developed features for gift card lifecycle: activation, adding balance, deactivation, redemption, and refunds.
- Added barcode scanning capability for fast and accurate card handling.
- Created reporting dashboard with charts and graphs for merchant insights.

Education

Lovely Professional University	2025 - 2027
MCA	<i>CGPA: -</i>

Nagpur University	2019 - 2022
B.Sc. in Computer Science	<i>Percentage: 69.3</i>

Relevant Coursework: Full Stack web development and DSA from AccioJob

Other Activities

- Followed Agile software development practices including sprint planning, client demos, and weekly progress updates.
